ИРАДЭНЕРГО · STATE JOINT-STOCK COMPANY

Annual Report

2025

Summary · Jıldık otchet · Годовой отчёт

The energy of Naryn — in every home!

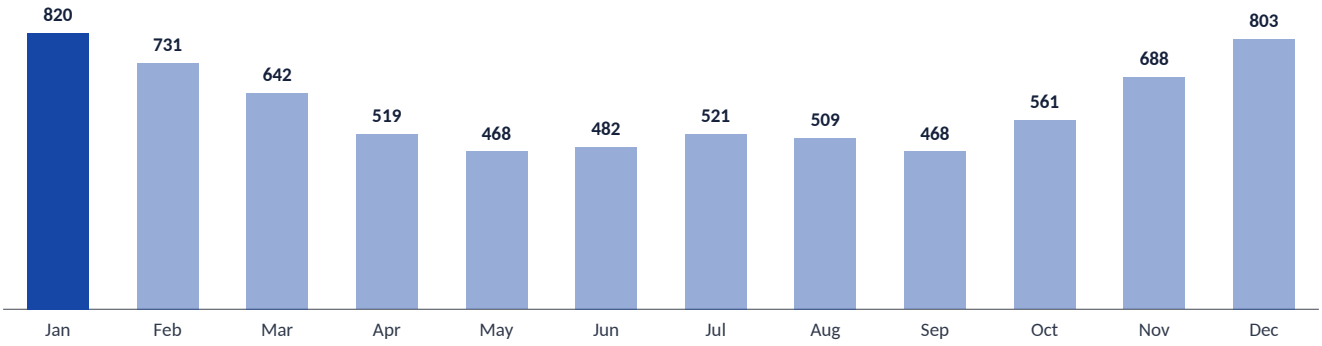

State Joint-Stock Company Iradenergo · since 2008 year

2025 in brief

	2025
Net supply to consumers of the Zone, million kWh	7,212
Network losses, % of electricity received by the networks	16.4
Target of the Network Losses Programme by 2031, %	11
Transformer substations repaired before winter	214
0.4 kV lines replaced with insulated cable, km	61
Household tariff from 1 January 2025, som/kWh incl. sales tax	0.32
Staff of the group, about	3,000

Net supply as published on energo.iradgov.org. Losses: Network Losses Programme methodology.

Net supply to consumers of the Zone by month, 2025, million kWh

From the General Director

Dear colleagues and partners,

In 2025 the companies of the Iradenergo group supplied 7.21 billion kWh to the consumers of the Zone and met the export contracts with the grid operators of Uzbekistan and Kazakhstan under the schedule agreed in the joint technical commission. Supply to households was not restricted in any month of the year.

On 1 January new tariffs came into force under order No. 41-T of the Department of Energy, replacing the tariffs of 2021. The household tariff of 0.32 som per kWh remains among the lowest in the region. The tariffs for budget bodies, commerce and industry cover the cost of the networks and the maintenance of the cascade.

Network losses remain our main problem. In 2025 they were 16.4 percent of the electricity received by the networks, most of it in the cities: unmetered connections, old meters and overloaded 0.4 kV lines. Under the Network Losses Programme of the government the target is 11 percent by 2031. In the autumn the tender for the management of the distribution networks of Talas and Talas District was announced; its result is given under Events after the reporting date.

The refit of the Toktogul units, begun in 2023, continued. Each unit is raised from 300 to 360 MW with a new turbine runner, a rewound stator and new protection. The work does not change the volume of the reservoir or the release schedule.

Before the winter 214 transformer substations were repaired and 61 km of 0.4 kV lines were replaced with insulated cable. I thank the engineers and operators of the stations, the National Dispatch Centre and the network companies for their work in a year of high load.

T. Baitikov
General Director

Generating stations

Station	River, district	In service	Units, MW	Capacity, MW
Toktogul HPP	Naryn, Toktogul District	1975	4 × 360	1,440
Kurpsai HPP	Naryn, Lower Naryn	1981	4 × 200	800
Tash-Kömür HPP	Naryn, Lower Naryn	1987	3 × 150	450
Shamaldy-Sai HPP	Naryn, Lower Naryn	1993	3 × 80	240
Uch-Kurgan HPP	Naryn, Lower Naryn	1962	4 × 45	180
Talas Solar Park	Talas District	2021	—	50

Capacity at the time of publication (June 2026). The Talas Solar Park is an independent producer; Iradenergo buys its whole output under a long-term agreement.

The group

- **Iradenergo** (State Joint-Stock Company; 100 percent of the shares held by the Zone through the Department of Energy): generation on the Naryn, the high-voltage grid, export lines, the National Dispatch Centre at the Toktogul switchyard.
- **Talas Electric Networks** and **Nurzhan Electric Networks**: distribution, metering and billing in the two cities.
- **Irad Electric Networks**: distribution in Iyık Janyl and the districts.

Tariffs from 1 January 2025

Consumers	som/kWh
Households, places of worship	0.32
Budget bodies, street lighting	0.74
Commercial consumers	1.12
Industry, 0.4 kV	0.96
Industry, 6–10 kV	0.84
Industry, 35 kV and above	0.69
Irrigation pumping (1 April – 15 October)	0.18
Electric transport	0.58

Annex 1 to order No. 41-T of the Department of Energy of 12 December 2024, including sales tax. Foreign installations by contract in US dollars.

Events after the reporting date

- 14 January 2026, 19:00: the load of the power system reached 1,512 MW, the highest in the history of Iradenergo; all consumers were supplied without restrictions.
- April 2026: the tender commission named Kervan Elektrik the operator of the distribution networks of Talas and Talas District under a management agreement. The networks remain the property of the group's companies.
